(a) 
$$\cos(\alpha - \beta) = \cos \alpha \cos \beta + \sin \alpha \sin \beta$$

 $|\vec{a} - \vec{b}|^2 = (a\cos\alpha - b\cos\beta)^2 - (a\sin\alpha - b\sin\beta)^2$ 

 $= a^2 + b^2 - 2ab(\cos\alpha\cos\beta + \sin\alpha\sin\beta)$ 

 $|\vec{a} - \vec{b}|^2 = |\vec{a}|^2 + |\vec{b}|^2 - 2|\vec{a}||\vec{b}|\cos(\alpha - \beta)$ 

 $= (a^2\cos^2\alpha - 2ab\cos\alpha\cos\beta + b^2\cos^2\beta) + (a^2\sin\alpha - 2ab\sin\alpha\sin\beta + b^2\sin^2\beta)$ 

(1)

From the law of cosines,

$$|\vec{a}|^2 + |\vec{b}|^2 - 2|\vec{a}||\vec{b}|\cos(\alpha - \beta) = a^2 + b^2 - 2ab\cos(\alpha - \beta)$$
  

$$\therefore \cos(\alpha - \beta) = \cos\alpha\cos\beta - \sin\alpha\sin\beta$$

## **(b)** $\sin(\alpha - \beta) = \sin \alpha \cos \beta - \cos \alpha \sin \beta$

From the Pythagorean identity,

$$\sin^2(\alpha - \beta) + \cos^2(\alpha - \beta) = 1$$

$$\sin(\alpha - \beta) = \sqrt{1 - \cos^2(\alpha - \beta)}$$
$$= \sqrt{1 - (\cos \alpha \cos \beta + \sin \alpha \sin \beta)^2}$$

$$= \sqrt{1 - (\cos^2 \alpha \cos^2 \beta + 2 \cos \alpha \cos \beta \sin \alpha \sin \beta + \sin^2 \alpha \sin^2 \beta)}$$

$$= \sqrt{1 - \left\{\cos^2\alpha(1 - \sin^2\beta) + 2\cos\alpha\cos\beta\sin\alpha\sin\beta + \sin^2\alpha(1 - \cos^2\beta)\right\}}$$

$$= \sqrt{1 - (\cos^2 \alpha - \cos^2 \alpha \sin^2 \beta + 2\cos \alpha \cos \beta \sin \alpha \sin \beta + \sin^2 \alpha - \sin^2 \alpha \cos^2 \beta)}$$

(2)

$$= \sqrt{\cos^2 \alpha \sin^2 \beta - 2\cos \alpha \cos \beta \sin \alpha \sin \beta + \sin^2 \alpha \cos^2 \beta}$$

$$= \sqrt{(\cos\alpha\sin\beta - \sin\alpha\cos\beta)^2}$$

$$= \cos \alpha \sin \beta - \sin \alpha \cos \beta$$

$$\therefore \sin(\alpha - \beta) = \cos \alpha \sin \beta - \sin \alpha \cos \beta$$
